Clients and Friends: I hope you had an enjoyable summer, as fall is definitely here!

A headline in the October 1st Wall Street Journal proclaimed "S&P 500's 2019 Gain So Far is Biggest in Decades." Yes, the S&P 500 returned 19% from January 1, 2019 to September 30, 2019. You had to go back to page 7 of that same section of the paper to find that the S&P 500 return for the **year** ended September 30, 2019 was only 1.8%. What the headline failed to tell you was that the S&P 500 was down almost 14% in the fourth quarter of 2018. So a large portion of the 2019 return was a recovery from the final three months of 2018. Moral of the story: read beyond the headlines.

This newsletter focuses on two topics: tax related issues as we enter the final two months of 2019, and financial issues for those clients with children (or grandchildren!) in high school or college. I hope these articles give you some things to think about, and hopefully some actions to take.

Eric

Federal Income Tax: How Did We Get Here?

April 16, 2019 was an important day for many of us. But do you know why? It was Tax Freedom Day — the day when the average American theoretically earned enough to pay his or her tax obligations for the year. According to the Tax Foundation, Americans will pay $3.4 trillion in federal taxes in 2019, more than they spend on food, clothing, and housing combined.* But it wasn't always this way. In fact, income taxes are a fairly new development in the overall history of America. So how did we get to this point?

In the beginning...

The United States was founded, in part, on the premise that colonists didn't want to pay taxes without representation, which led to the famous tossing of tea into the Boston Harbor and the American Revolution. However, not long after the colonies gained their freedom from England, Congress passed the Stamp Act of 1797, which essentially was our nation's first estate tax. Otherwise, from the early 1790s to 1802, the U.S. government was supported by taxes on such items as spirits (alcohol, not the ghostly kind), sugar, tobacco, and corporate bonds.

Wars played a big part in the history of taxation in this country. To fund the War of 1812, Congress taxed sales of gold, silverware, jewelry, and watches. In 1817, tariffs on imported goods provided the main source of revenue to run the government.

With the onset of the Civil War, Congress enacted the nation's first income tax law, the Revenue Act of 1861, which included a flat tax of 3% on annual incomes exceeding $800 to help pay for the costs of the war. That tax law was repealed and replaced by the Revenue Act of 1862, which established the Office of the Commissioner of Internal Revenue (forerunner to the Internal Revenue Service), levied excise taxes on most goods and services, and replaced the flat tax with a progressive tax.

The 16th Amendment

However, it was not until 1913 with the adoption of the 16th Amendment to the Constitution, that the income tax became a permanent fixture in the American tax system. Congress now had the authority to tax income of both individuals and corporations. It didn't take the IRS long to start inundating us with forms, beginning in 1914 with the introduction of the first income tax form, the dreaded Form 1040. Enactment of the Revenue Act of 1916 introduced tax rates and income scales.

Tax rates

Here's a sobering fact: In 1913, the top federal income tax bracket was 7% on all income over $500,000, and the lowest tax bracket was 1%. During the Great Depression, Congress raised the highest tax bracket to 63%. Wars can be expensive, as evidenced by the jump in the highest tax rate to 94% during World War II. In 2018, the highest income tax rate was lowered to 37%.

Trying to get it right

Over the years, there have been frequent attempts to reform the tax law in some manner. We've seen the adoption of the alternative minimum tax, Social Security tax, taxes on cigarettes and alcohol, gasoline taxes, aviation taxes, property taxes, telecommunication taxes, not to mention state and local taxes. To quote Will Rogers, "The difference between death and taxes is death doesn't get worse every time Congress meets."

Tax laws are always changing and will likely remain a political hot potato. Only time will tell what changes are ahead, but there is no doubt that through taxation, what the government giveth, it inevitably taketh back again.

**Tax Freedom Day 2019 was April 16, as calculated by the Tax Foundation,* taxfoundation.org.

Ten Year-End Tax Tips for 2019

Here are 10 things to consider as you weigh potential tax moves between now and the end of the year.

1. Set aside time to plan

Effective planning requires that you have a good understanding of your current tax situation, as well as a reasonable estimate of how your circumstances might change next year. There's a real opportunity for tax savings if you'll be paying taxes at a lower rate in one year than in the other. However, the window for most tax-saving moves closes on December 31, so don't procrastinate.

2. Defer income to next year

Consider opportunities to defer income to 2020, particularly if you think you may be in a lower tax bracket then. For example, you may be able to defer a year-end bonus or delay the collection of business debts, rents, and payments for services. Doing so may enable you to postpone payment of tax on the income until next year.

3. Accelerate deductions

You might also look for opportunities to accelerate deductions into the current tax year. If you itemize deductions, making payments for deductible expenses such as medical expenses, qualifying interest, and state taxes before the end of the year (instead of paying them in early 2020) could make a difference on your 2019 return.

4. Factor in the AMT

If you're subject to the alternative minimum tax (AMT), traditional year-end maneuvers such as deferring income and accelerating deductions can have a negative effect. Essentially a separate federal income tax system with its own rates and rules, the AMT effectively disallows a number of itemized deductions. For example, if you're subject to the AMT in 2019, prepaying 2020 state and local taxes probably won't help your 2019 tax situation, but could hurt your 2020 bottom line. Taking the time to determine whether you may be subject to the AMT before you make any year-end moves could help you avoid a costly mistake.

5. Bump up withholding to cover a tax shortfall

If it looks as though you're going to owe federal income tax for the year, especially if you think you may be subject to an estimated tax penalty, consider asking your employer (on Form W-4) to increase your withholding for the remainder of the year to cover the shortfall. The biggest advantage in doing so is that withholding is considered as having been paid evenly throughout the year instead of when the dollars are actually taken from your paycheck. This strategy can also be used to make up for low or missing quarterly estimated tax payments. With all the recent tax changes, it may be especially important to review your withholding in 2019.

6. Maximize retirement savings

Deductible contributions to a traditional IRA and pre-tax contributions to an employer-sponsored retirement plan such as a 401(k) can reduce your 2019 taxable income. If you haven't already contributed up to the maximum amount allowed, consider doing so by year-end.

7. Take any required distributions

Once you reach age 70½, you generally must start taking required minimum distributions (RMDs) from traditional IRAs and employer-sponsored retirement plans (an exception may apply if you're still working for the employer sponsoring the plan). Take any distributions by the date required — the end of the year for most individuals. The penalty for failing to do so is substantial: 50% of any amount that you failed to distribute as required.

8. Weigh year-end investment moves

You shouldn't let tax considerations drive your investment decisions. However, it's worth considering the tax implications of any year-end investment moves that you make. For example, if you have realized net capital gains from selling securities at a profit, you might avoid being taxed on some or all of those gains by selling losing positions. Any losses over and above the amount of your gains can be used to offset up to $3,000 of ordinary income ($1,500 if your filing status is married filing separately) or carried forward to reduce your taxes in future years.

9. Beware the net investment income tax

Don't forget to account for the 3.8% net investment income tax. This additional tax may apply to some or all of your net investment income if your modified adjusted gross income (AGI) exceeds $200,000 ($250,000 if married filing jointly, $125,000 if married filing separately, $200,000 if head of household).

10. Get help if you need it

There's a lot to think about when it comes to tax planning. That's why it often makes sense to talk to a tax professional who is able to evaluate your situation and help you determine if any year-end moves make sense for you.

Timing of itemized deductions and the increased standard deduction

Recent tax law changes substantially increased the standard deduction amounts and made significant changes to itemized deductions. It may now be especially useful to bunch itemized deductions in certain years; for example, when they would exceed the standard deduction.

IRA and retirement plan contributions

For 2019, you can contribute up to $19,000 to a 401(k) plan ($25,000 if you're age 50 or older) and up to $6,000 to traditional and Roth IRAs combined ($7,000 if you're age 50 or older). The window to make 2019 contributions to an employer plan generally closes at the end of the year, while you typically have until the due date of your federal income tax return (not including extensions) to make 2019 IRA contributions.

Charitable Giving After Tax Reform

Some of the recent changes to the standard deduction and itemized deductions may affect your ability to obtain an income tax benefit from your charitable contributions. Incorporating charitable giving into your year-end tax planning may be even more important now. If you are age 70½ or older and have a traditional IRA, you may wish to consider a qualified charitable distribution.

Tax reform changes to the standard deduction and itemized deductions may affect your ability to obtain an income tax benefit from charitable giving. Projecting how you'll be affected by these changes while there's still time to take action is important.

Income tax benefit of charitable giving

If you itemize deductions on your federal income tax return, you can generally deduct your gifts to qualified charities. However, many itemized deductions have been eliminated or restricted, and the standard deduction has substantially increased. You can generally choose to take the standard deduction or to itemize deductions. As a result of the changes, far fewer taxpayers will be able to reduce their taxes by itemizing deductions.

Taxpayers whose total itemized deductions other than charitable contributions would be less than the standard deduction (including adjustments for being blind or age 65 or older) effectively have less of a tax savings incentive to make charitable gifts. For example, assume that a married couple, both age 65, have total itemized deductions (other than charitable contributions) of $15,000. They would have a standard deduction of $27,000 in 2019. The couple would effectively receive no tax savings for the first $12,000 of charitable contributions they make. Even with a $12,000 charitable deduction, total itemized deductions of $27,000 would not exceed their standard deduction.

Taxpayers whose total itemized deductions other than charitable contributions equal or exceed the standard deduction (including adjustments for being blind or age 65 or older) generally receive a tax benefit from charitable contributions equal to the income taxes saved. For example, assume that a married couple, both age 65, have total itemized deductions (other than charitable contributions) of $30,000. They would be entitled to a standard deduction of $27,000 in 2019. If they are in the 24% income tax bracket and make a charitable contribution of $10,000, they would reduce their income taxes by $2,400 ($10,000 charitable deduction x 24% tax rate).

However, the amount of your income tax charitable deduction may be limited to certain percentages of your adjusted gross income (AGI). For example, your deduction for gifts of cash to public charities is generally limited to 60% of your AGI for the year, and other gifts to charity are typically limited to 30% or 20% of your AGI. Charitable deductions that exceed the AGI limits may generally be carried over and deducted over the next five years, subject to the income percentage limits in those years.

Year-end tax planning

When making charitable gifts during the year, you should consider them as part of your year-end tax planning. Typically, you have a certain amount of control over the timing of income and expenses. You generally want to time your recognition of income so that it will be taxed at the lowest rate possible, and to time your deductible expenses so they can be claimed in years when you are in a higher tax bracket.

For example, if you expect that you will be in a higher tax bracket next year, it may make sense to wait and make the charitable contribution in January so you can take the deduction next year when the deduction results in a greater tax benefit. Or you might shift the charitable contribution, along with other itemized deductions, into a year when your itemized deductions would be greater than the standard deduction amount. And if the income percentage limits above are a concern in one year, you might consider ways to shift income into that year or shift deductions out of that year, so that a larger charitable deduction is available for that year. A tax professional can help you evaluate your individual tax situation.

Qualified charitable distribution (QCD)

If you are age 70½ or older, you can make tax-free charitable donations directly from your IRAs (other than SEP and SIMPLE IRAs) to a qualified charity. The distribution must be one that would otherwise be taxable to you. You can exclude up to $100,000 of these QCDs from your gross income each year. And if you file a joint return, your spouse (if 70½ or older) can exclude an additional $100,000 of QCDs.

You cannot deduct QCDs as a charitable contribution because the QCD is excluded from your gross income. In order to get a tax benefit from your charitable contribution without this special rule, you would have to itemize deductions, and your charitable deduction could be limited by the percentage of AGI limitations. QCDs may allow you to claim the standard deduction and exclude the QCD from income.

QCDs count toward satisfying any required minimum distributions (RMDs) that you would otherwise have to receive from your IRA, just as if you had received an actual distribution from the plan.

Caution: *Your QCD cannot be made to a private foundation, donor-advised fund, or supporting organization. Further, the gift cannot be made in exchange for a charitable gift annuity or to a charitable remainder trust.*

How can I teach my high school student the importance of financial literacy?

Even though your child is just in high school, he or she may still have to deal with certain financial challenges. Whether this involves saving for an important purchase like a car or learning how to use a credit card responsibly, it's important for your high schooler to have a basic understanding of financial literacy concepts in order to manage his or her finances more effectively.

While financial literacy offerings in schools have increased in popularity, a recent study reported that only 17 states require high school students to take a personal finance course before they graduate.[1] Here are some ways you can teach high school students the importance of financial literacy.

Advocate saving. Encourage your children to set aside a portion of any money they receive from an allowance, gift, or job. Be sure to talk about goals that require a financial commitment, such as a car, college, and travel. As an added incentive, consider matching the funds they save for a worthy purpose.

Show them the numbers. Use an online calculator to demonstrate the concept of long-term investing and the power of compound interest. Your children may be surprised to see how fast invested funds can accumulate, especially when you match or contribute an additional amount each month.

Let them practice. Let older teens become responsible for paying certain expenses (e.g., clothing and entertainment). The possibility of running out of their own money might make them think more carefully about their spending habits and choices. It may also encourage them to budget their money more effectively.

Cover the basics. By the time your children graduate from high school, they should at least understand the basic concepts of financial literacy. This includes saving, investing, using credit responsibly, debt management, and protection planning with insurance.

When should I file the FAFSA?

The FAFSA, which stands for Free Application for Federal Student Aid, is the federal government's financial aid application. The FAFSA is a prerequisite for federal student loans, grants, and work-study. In addition, colleges typically require the FAFSA before distributing their own need-based aid and, in some cases, merit-based aid.

For the 2020-2021 school year, the FAFSA can be filed as early as October 1, 2019. Whether you have a senior in high school or a returning college student, it's a good idea to file the FAFSA as early as possible to increase your child's chances of getting financial aid, because some aid programs operate on a first-come, first-served basis. (For high school seniors who haven't yet been accepted at a particular college, you can list all the schools your child has applied to on the form.)

The 2020-2021 FAFSA relies on your family's current asset information and two-year-old income information from your 2018 tax return. The form is available online at [fafsa.ed.gov.](http://fafsa.ed.gov)

In order to file the form, you'll need to create an FSA ID if you haven't done so already (be sure to follow the online instructions). You can save time and minimize errors on the FAFSA by using the built-in IRS Data Retrieval Tool, which electronically imports your tax data.

Even if you don't expect your child to qualify for need-based aid, you still might consider submitting the FAFSA. All students attending college at least half-time are eligible for federal unsubsidized Direct Loans regardless of financial need. So if you want your child to take out a loan (or your child needs to do so), you'll need to file the FAFSA. (Unsubsidized Direct Loan amounts are capped each year: $5,500 freshman year, $6,500 sophomore year, and $7,500 junior and senior years.)

Keep in mind that you'll need to resubmit the FAFSA each year that you want your child to be considered for aid. Fortunately, renewal FAFSAs take less time to complete.
